From June 22nd, 2016. Google requires an api key for Google Maps
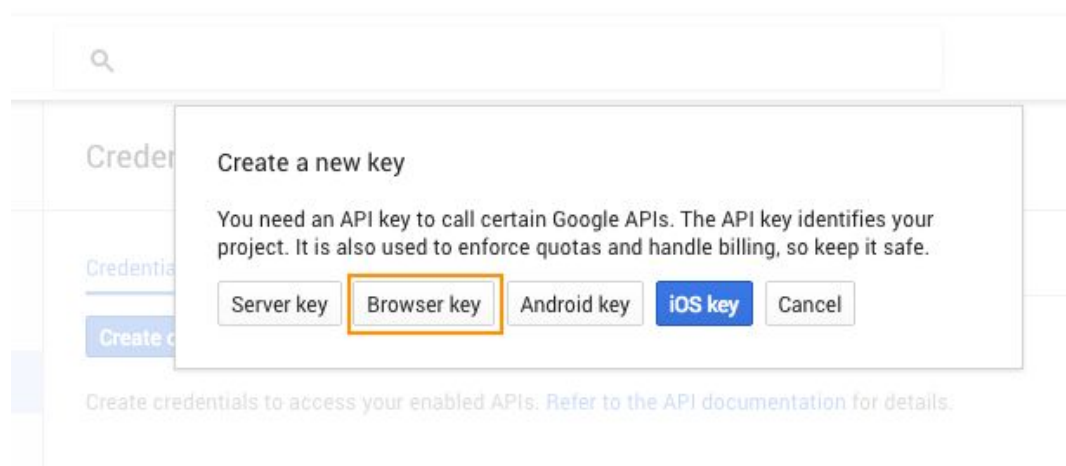

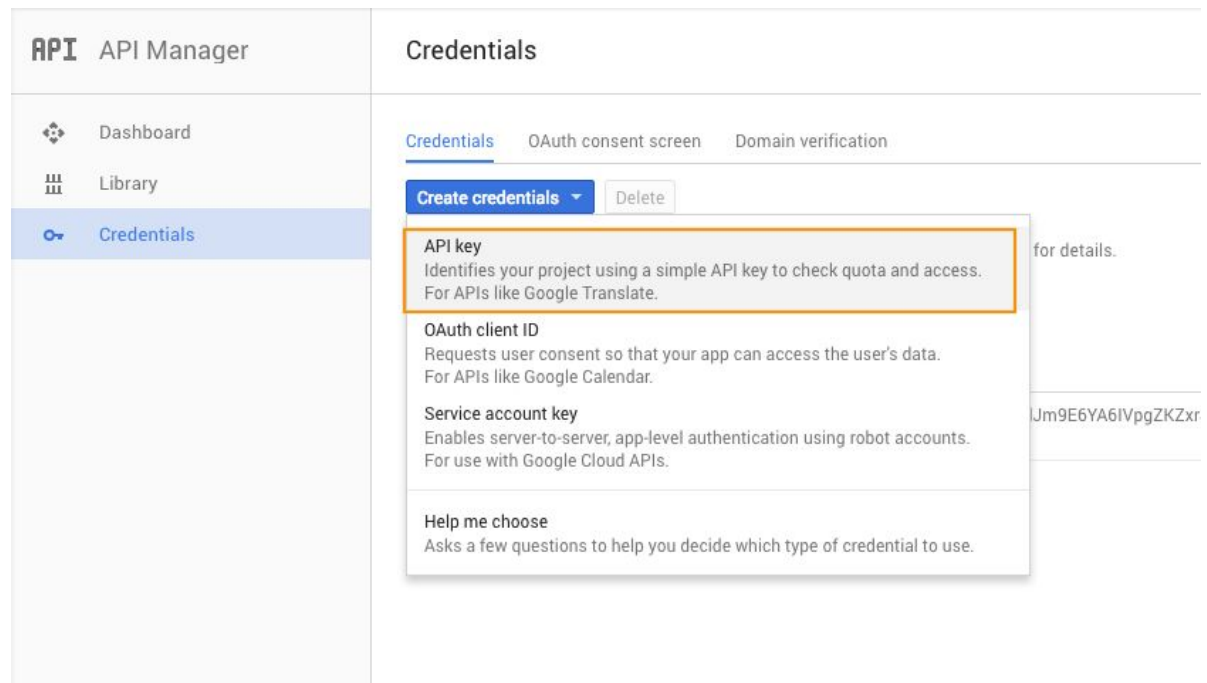

You have to go to Google Console and create a new project.
Credentials > Create credentials > API Key (Browser Key)

Note: If you want your credentials to work on both domain.tld andwww.domain.tld you must have both in the credentials. My way of doing this was adding*.yourdomain.com/* and yourdomain.com/* to the allowed domains.

Once you've got your API Keys you need to add the key to index.html

1) Find the line:

```
<script type="text/javascript"
src="http://maps.google.com/maps/api/js?sensor=true"></script>
```

2) Change it to:

```
<script src="https://maps.googleapis.com/maps/api/js?key=YOUR_API_KEY&sensor=true"
  type="text/javascript"></script>
```
